Hi, I'm Jona, a producer person with over 13 years of experience leading co-located and remote teams across various disciplines in the games industry.

Relevant Work Experience

From localization to game production, and plenty of tangents along the way — here are some of the steps that brought me to where I am today.

Senior Producer Innersloth — November 2023 – Current

I serve as the Producer for Among Us, where I lead and coordinate a cross-functional team of programmers, backend engineers, artists, game designers, QA testers, and localization professionals in the full development lifecycle, from concept to release (and all subsequent live ops). While in this position, I have been responsible for guiding the team through numerous gameplay and content updates, an overhauled matchmaker, improved player reporting flows, and countless process and workflow improvements that have helped Among Us sustain its massive player base, even as the game approaches its 10 year anniversary.

Senior Product Manager Agora — June 2022 – November 2023

Agora is a real-time engagement platform as a service provider, where I lead the company's efforts to solve the challenge of enabling presence from any device into any virtual world or gaming application by: conducting market research and competitive analysis; managing the product development lifecycle, including gathering requirements from customers and Agora's solutions architect team; leading the development of reference applications designed to showcase Agora's capabilities with game engines and web applications.

Producer Reality Crisis — November 2018 – February 2022

Reality Crisis is a distributed Augmented Reality mobile game development studio focused on bringing real-world interactions to the action sports genre, where I worked with the company founders to bring their flagship game to market, from 0 -> 1. While in this position, I led R&D efforts to test viability of 7 different emergent Augmented Reality technologies for mobile game development by: conducting customer research interviews and usability tests to inform design iterations on early game prototypes; collaborating with company leadership and internal stakeholders to define, prioritize and execute on the roadmap for Skatrix; defining the tech stack for Skatrix as a live service game, and managing the resulting backlog; implementing Agile project management methodologies to serve a team of artists, engineers, designers, and QA testers distributed across 6 different timezones in Europe, Oceania, and the Americas.

Producer (LATAM) Riot Games — June 2015 – April 2018

In addition to maintaining continuity of my responsibilities in the localization team, I developed and produced landmark original content for the LATAM region: audio stories, documentaries, Esports news and analysis, behind the scenes featurettes, animations, and live audiovisual experiences.

Localization Coordinator Riot Games — June 2014 – May 2015

As a founding member of the LATAM team, I was responsible for implementing localization best practices for web pages, graphics, comics, promos, and in-game text strings, as well as managing LATAM LQA, and VO localization pipelines.

Spanish Language Specialist NCSOFT — February 2013 – June 2014

I led external player support teams in crafting and localizing player communications for Guild Wars, Guild Wars 2, Lineage II, and during the release of Wildstar.

Certificates & Education

ICP-ATF | Agile Team Facilitation
The Agile Company · 2025

Professional Scrum Master (PSM I)
